

NEW REHABILITATION CENTRE BY MATTEO THUN & PARTNERS

FOR EUROPE'S BIGGEST AND LEADING ORTHOPEDIC UNIVERSITY HOSPITAL IN GERMANY

NEW REHABILITATION CENTRE

In addition to Waldkliniken Eisenberg, Matteo Thun & Partners and HDR TMK have been selected to build the new rehabilitation centre that will be part of the whole Waldkliniken Eisenberg - Deutsches Zentrum für Orthopädie - the biggest and leading orthopedic university hospital in Europe.

PATIENT CARE ON A NEW LEVEL

The concept of the rehabilitation centre is in line with the philosophy already applied to Waldkliniken Eisenberg - building a close relationship between physical space, hospitality, and patient care to a level rarely seen in hospital and rehab environments. The wellbeing of the patients and the creation of a direct contact with the surrounding nature are vital to the care that will be offered at Neubau Rehabilitation. The rehabilitation centre will see a specific design to welcome orthopaedic patients and help them in their recreational process. "La Piazza" will offer plenty space for patients' exercises being located at the centre point of the rehab building.

IN COLLABORATION WITH HDR TMK

Matteo Thun & Partners will realize the project in collaboration with HDR TMK, specialist in health, science and technology design.

Groundbreaking for the rehabilitation centre is planned for 2017 - completion is scheduled for 2019.
